

smart managed data security solutions

how safe is your network?

The internet has revolutionised the way we do business, linking customers, suppliers, partners and employees across the globe.

But this level of connectivity and access brings with it the added security threat posed by viruses and hackers. With the 24 x 7 exposure that comes with broadband connection, the only realistic safeguard against this evolving threat is continuous active monitoring.

smart is a managed gateway firewall appliance delivering support for anti-virus, anti-spyware, intrusion prevention, content filtering, and more.

professional security cover

Maintaining information security is a highly specialised activity, and this can be prohibitively expensive for small and medium-sized companies. A managed service from an outside provider is the most cost effective means of achieving professional security cover.

smart is a complete, outsourced service, giving you either 'working day' cover or full 24 x 7 protection as an option. Scanning of all POP3 and STMP e-mail messages and attachments prevents viruses entering your system. As well as protecting against unauthorised access to data from outside the company, it also offers comprehensive website blocking – so you can restrict employees' access to inappropriate sites.

Security network monitoring provides immediate, real-time feedback about the effectiveness of security measures, and how they may be affected by variables such as new threats, software updates and system reconfigurations.

easy installation, scalable protection

A totally scalable solution, smart is ideal for businesses of all sizes, from small companies to large corporate organisations. Installation is quick and easy – the smart box simply connects between your network and your internet connection. smart is preconfigured before delivery, so there is no setting up to do. You just plug it in and you're in business. In the unlikely event of a smart box failure, replacement is easy, so downtime is minimised.

Web-based management gives you access to specific controls, enabling you to tailor protection to suit your internet usage. Options include the ability to block specific types of website, such as those offering gambling or sexually explicit material. Detailed reporting allows you to view traffic between your network and the internet, highlighting problems and identifying potential problem areas.

managed service options	home	home/tel worker (5 user)	small business (10 user)	small business (25 user)	medium business (50 user)
Cost (per month)	£15.00	£45.00	£75.00	£125.00	£195.00
Standard service including:					
advance replacement		●	●	●	●
3 year content filtering subscription		●	●	●	●
3 Year AV Subscription		●	●	●	●
VPN (10 Connections) per month	–	£30.00	£30.00	£30.00	£30.00

affordable and user-friendly

smart is an affordable, fully-integrated, managed security system. All you have to do is plug in the smart box. We handle everything from initial pre-delivery configuration to ongoing updates and support. Instead of incurring major capital costs, you simply pay as you go.

Because your business is evolving all the time, we can make any subsequent configuration changes to accommodate this. You will receive detailed confidential records of configuration settings at set-up and after any changes. Security reports are available from us whenever you need them.

smart managed service features include:

- Simple installation and web management – configuration is easy with our web management interface
- Periodic security log review – determines whether security violations have been attempted
- Includes software updates and hardware maintenance
- Low cost – no up-front charges, just a set monthly fee

gateway anti-virus, anti-spyware and intrusion prevention

- Gateway protection against viruses, spyware, worms, Trojans and problems such as buffer overflows, across a multitude of e-mail, web, file transfer and stream-based protocols, plus instant messaging and peer-to-peer applications
- Powerful application layer attack protection against threats originating inside the network

global security client

- Combines personal firewall and VPN access into a single, easy to use solution and extends comprehensive desktop security to mobile and remote workers
- Ability to configure and distribute granular policies by IP address or OS for added flexibility

enforced client anti-virus and anti-spyware

- Enforced anti-virus protection at the desktop detects and removes viruses from e-mails and attachments before they enter your network eliminating the need for time-consuming PC-by-PC deployments
- Constant updates - automatically incorporates the latest AV updates as soon as they are issued
- Fast time-to-response during virus outbreaks reduces time and costs associated with administering an anti-virus policy

content filtering service

- Web content filtering manages and enforces your own usage policy or uses a default set of criteria
- Eliminates the need for a costly, dedicated filtering server

about synapse

As a leading provider of managed services to blue-chip organisations worldwide, our ability to help prepare businesses for the constantly evolving threats associated with the internet enables our customers to ensure they stay one step ahead of the competition.

Handling everything from initial configuration to ongoing updates, support and monitoring, our approach is holistic and proactive. We focus on continuous improvement to help you deliver value to your business. Through our portfolio of services we help our customers manage operational risk, and build a flexible, resilient IT environment.
